

CHECKING AND REPLACING THE BRUSH PART OF THE LEVELER

Step

1.

Checking the length of the brush part of the leveler

1.

Leveler

Turn the leveler vertically to the upper position in the center of the measuring cup.

2.

Brush parts of the correct length.

The brush part can be found under the leveler. Check if the brush part hits the plastic collar of the measuring cup. A brush part of a suitable length touches the plastic collar of the measuring cup well on both sides.

In this case, there is no need to change the brush.

3.

In both pictures, the brush parts are too short.

Too short brush part on both sides. The brushes do not touch the plastic collar of the measuring cup.

Replace the brush part with a new one.

Too short brush part on one side. If the brush part touches the plastic collar of the measuring cup only on one side, it will not work correctly.

Replace the brush part with a new one.

Step

2.

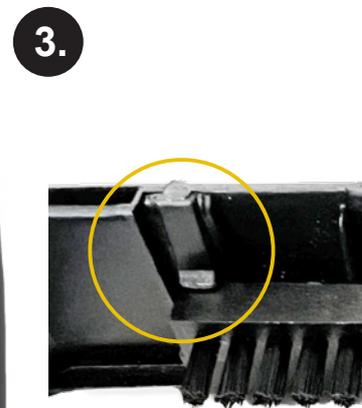

Replacing the brush part of the leveler

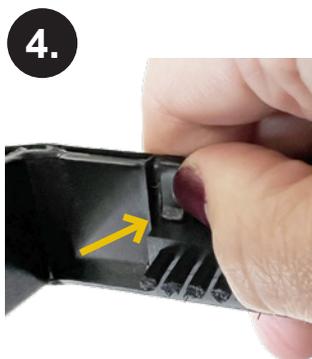

Remove the leveler. Move the leveler slightly to the front diagonally. Remove the leveler by pulling its handles straight outward from the device, from the attachment points at the bottom of the device.

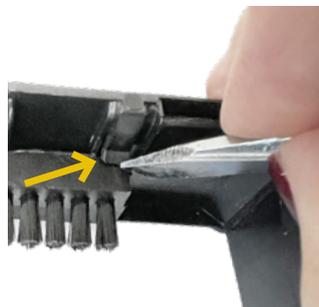

Put the leveler on a flat surface. Opening clips can be found above the brush.

Close-up of the opening clip.

Or

Press the clip inwards, for example with a fingernail or screwdriver, so the brush part can be released.

Pull off the brush part with your other hand.

Install a new brush by pushing it the same way into its place. The brush part is correctly installed when the clips on both sides click.

Reattach the leveler back to the device.
